Product Description

3.0V Custom LCD Panel Black Silk Screen Segmented TN Transmissive FPC Connect

Product Description

Twisted Nematic Technology:

- The "Twisted Nematic" part of the name refers to the liquid crystal technology used. In this configuration, the liquid crystals are arranged in a way that, when no voltage is applied, they twist light passing through them.
- When a voltage is applied, the crystals untwist and alter the light's polarization, effectively turning the segment on or off to create the desired characters or symbols.

Segment-based Display:

- TN segment LCDs typically consist of individual segments (often 7-segment or 14-segment) arranged to form numbers, letters, or other characters.
- Each segment can be independently controlled to either be in an "on" (lit) or "off" (unlit) state, allowing for the formation of various alphanumeric characters.
